DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1, 3-16, and 18-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Lin et al. (2003/0114154).

Regarding claims 1, 3-6, 10-16, and 19, Lin discloses a systems and methods for preventing unauthorized use of roaming numbers in a wireless telecommunication system comprising: an originating mobile switching center and a serving mobile switching center that serve to connect a call from a communication device to a mobile device that is supported by the serving mobile switching center (see fig.2, element 111, 231, 232, 120 and its description); wherein the mobile device is associated with an established telephone number (see fig.2, element 120, paragraphs [0021]-[0027], and its description), wherein the serving mobile switching center is associated with an identification number (see fig.2, element 232, 120 paragraphs [0021]-[0027], and its description); wherein the originating mobile switching center employs the identification number to connect the call with the serving mobile switching center (see fig.2, element 231, 232, paragraphs [0021]-[0027], and its description); wherein the serving mobile

Art Unit: 2683

switching center employs the established telephone number to connect the call to the mobile device (see fig.2, elements 232, 111, paragraphs [0021]-[0027], and its description).

Regarding claims 7-9, 18, Lin further discloses serving mobile switching center is associated with a plurality of identification numbers, wherein the serving mobile switching center selects the identification number for the call from the plurality of identification numbers based on one or more characteristics of the call (see paragraph [0008] and [0023]).

Regarding claim 20, the one or more computer readable signal bearing media is reflected to the method and apparatus for providing in roaming communication system in claims 1, and 13, therefore, it is rejected for the same reasons set forth above.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 2 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lin et al. (2003/0114154) in view of Lantto et al. (5,537,457).

Regarding claims 2 and 17, Lin discloses all the subject matter described in rejected claim 1, except for connects the call to the roaming mobile device without allocation of a temporary roaming number for the roaming mobile device. However,

Art Unit: 2683

Lantto disclose a method for handling calls to a non-registered mobile subscriber in a mobile telephone system comprises a roaming mobile device, wherein the serving mobile switching center connects the call to the roaming mobile device without allocation of a temporary roaming number for the roaming mobile device (see claim 1). Thus, it would have been obvious to one having ordinary skill in the art at the time the invention was made to use Lantto's connects the call to the roaming mobile device without allocation of a temporary roaming number in order to handle calls to a non-registered terminal in a mobile telephone system or particularly in a system which operates without specific roaming numbers.
